Important Information

1. Bonus Philosophy

This is a participating insurance plan which can share the divisible surplus from the product group determined by us. Divisible surplus refers to profits available for distribution back to Policy Owners as determined by us. Terminal Bonus will be determined with an aim to ensure a fair sharing of profits between Policy Owners and the Company, as well as among different groups of Policy Owners. We aim to share with Policy Owners no less than 90% of the divisible surplus while the remaining portion goes to the Company.

A committee has been set up to provide independent advice on the determination of the Terminal Bonus amounts to the Board of the Company. The actual Terminal Bonus, which are recommended by the Appointed Actuary, will be decided upon the deliberation of the committee and finally approved by the Board of Directors of the Company, including one or more Independent Non-Executive Directors.

The Terminal Bonus will be reviewed and determined by us at least once per year. Terminal Bonus does not form a permanent addition to the Policy. In determining the Terminal Bonus, we will take into account both past experience and expected future outlooks for factors including, but not limited to, the following.

Claims: These include the costs of providing coverage such as Death Benefit and other benefits under the insurance plan.

Expenses: These include both expenses directly related to the Policy (e.g. distribution costs, underwriting, issue and premium collection expenses) and indirect expenses allocated to the insurance plan (e.g. general administrative costs).

Investment performance: This includes interest / dividend income and changes in the market value of the invested assets. Investment performance could be affected by fluctuations in interest / dividend income (both interest / dividend earnings and the outlook for interest rates) and various market risk factors, such as credit spread, default risk, fluctuations in equity prices, property prices, commodity prices, exchange rates if the currency of the backing asset is different from the policy currency, and liquidity risk, etc.

Surrenders: These may include policy lapses, surrenders, partial surrenders and other deductions and benefit payments; and the corresponding impact on investments.

To provide more stable Terminal Bonus, we may retain returns during periods of strong performance to support stronger Terminal Bonus in times of less favourable performance, and vice versa.

2. Investment Policy, Objective and Strategy

YF Life Insurance International Ltd.'s investment objective is to optimize Policy Owners' returns over the long term with an acceptable level of risk. Assets are invested in a broad range of investment instruments, which may include global equities, bonds and other fixed-income instruments, properties, commodities and other alternative investment assets. This diversified investment portfolio aims to achieve attractive and stable long-term returns.

Past and expected future performance, volatility, and the associated risks of investment assets are considered in selecting investment assets and managing our investment portfolio.
